- Follow your doctor's recommended screening schedule
- Maintain a healthy lifestyle with regular exercise
- Eat a balanced diet rich in fruits and vegetables
- Be aware of any changes and report them to your doctor

■ Stay informed about breast health

Important Notes

This is a screening tool only: It cannot diagnose cancer. Only medical tests and professional evaluation can provide a definitive diagnosis.

Symptoms don't always mean cancer: Many breast symptoms are caused by benign (non-cancerous) conditions. Professional evaluation is needed to determine the cause.

Early detection saves lives: If you have concerning symptoms, don't delay seeking medical attention. Early detection significantly improves treatment outcomes.

Follow-up is essential: Regardless of this screening result, continue regular check-ups and follow your doctor's recommendations.
